

EEG101 Community Framework

Toward Rigorous, Democratized and Responsible EEG Science

We commit to using rigorous and transparent methods, democratize practices by increasing the diversity of scientists, experimental participants, and affected populations, and take responsibility for the ethical and environmental impacts of our work. This Community Framework (CF) is both a pledge and an invitation to explore existing resources, to update scientific practices.

The Community Framework is made possible by a large [community of voluntary contributors](#). **Join us !**

Pledge for a more robust, inclusive and sustainable EEG science.

I - Validity & Rigor

II - Democratization

III - Responsibility & Sustainability

Challenges

- Low replicability
- Unstandardized practices
- Unexplained models
- Narrow metrics research evaluation

- Uneven access to resources
- Collective biases and groupthink
- Lack of generalizability
- Lack of accessibility and impact

- Individual privacy
- Cognitive freedom
- Technological hype
- Reliance on high impact tech

Levers

- Improve research practices
- Robust methods
- Standardization & transparency
- Open Science
- Theories and explanations

- Build diverse and inclusive research teams
- Recruit diverse participants
- Ensure accessible and open research outputs

- Anticipate ethical risks of applications
- Avoid hype & critically assess new tools
- Reduce environmental footprint

Tools & Resources

- Statements & Regulations
- National/International networks
- Publication models
- Open repositories & platforms

- Statements & Regulations
- National/International networks
- Inclusive lab culture
- Large scale collaborations

- Statements & Regulations
- National/International networks
- Transformative interventions

Stakeholders: *Who we aim to work with*

- ★ Scientists, Reviewers, Editors — enter the CF principles in researchers' agenda
- ★ Funders, Institutions — tailor evaluation schemas to account for CF criteria
- ★ Regulators, Ethics committees, Law makers — adapt regulations to enforce CF in rules and laws
- ★ Publishers — provide tools to highlight compliance with CF in publications
- ★ Industry — comply with CF principles in product design
